users

Id: UUID email: noasouccar@icloud.com password: Bromberger1\$
Addresses: [5 stone rd, 178 Skillman], Name: Noa Souccar

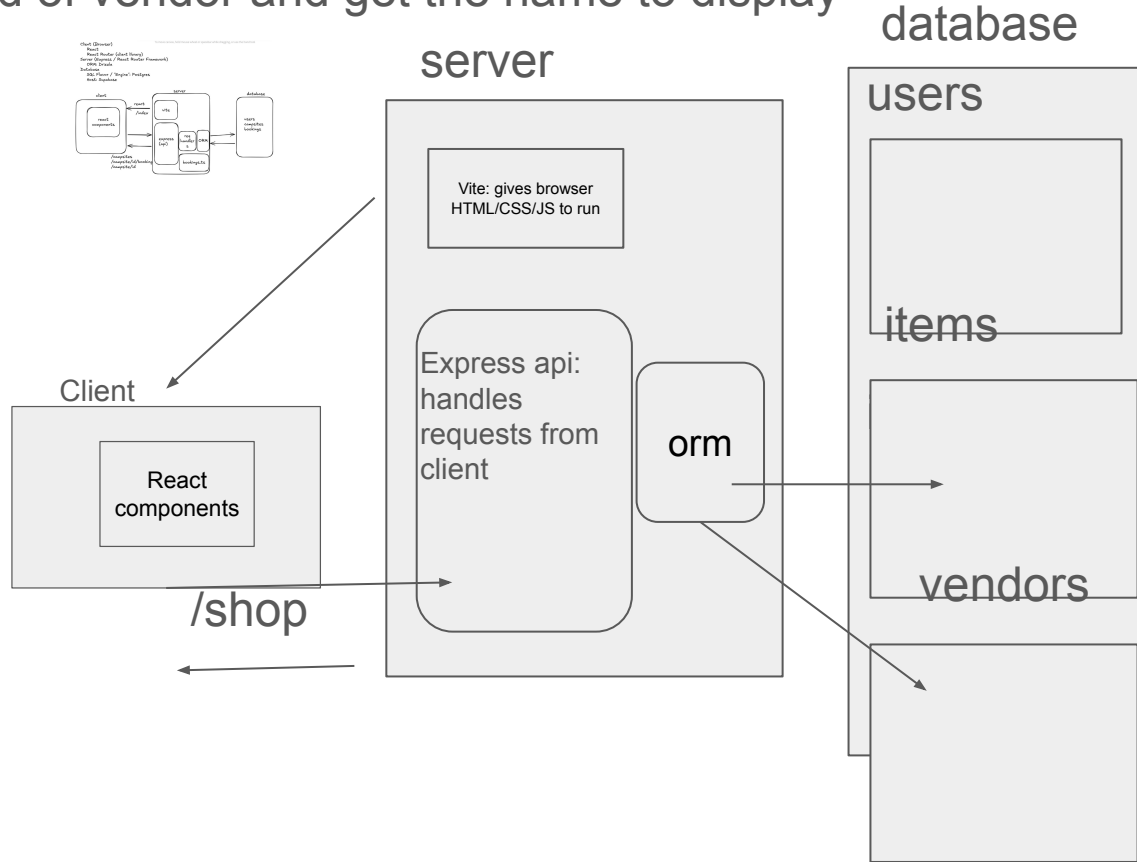

items

Id: UUID name: "Artisanal towel" vendor: vendor IDI, Price: 4\$
Description: "handcrafted towel" , images = []

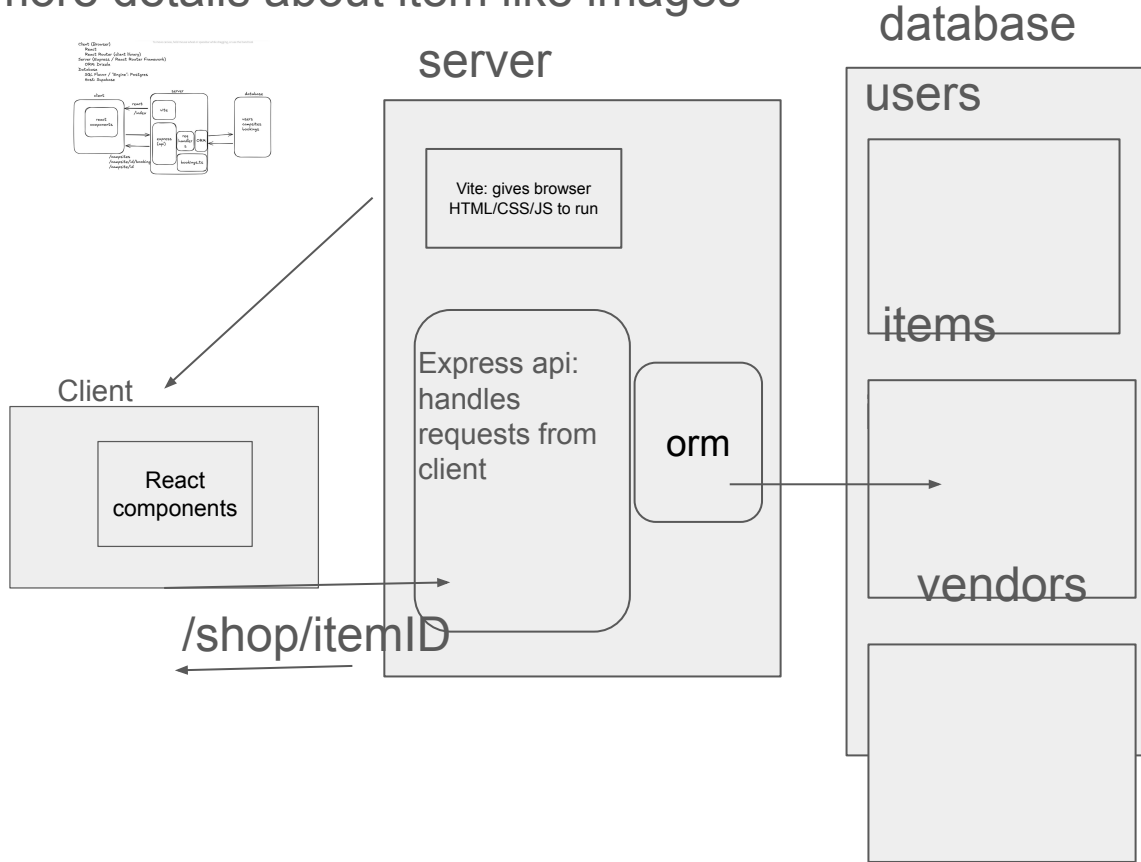

Vendors

Id: UUID email: mariss[@icloud.com](mailto:mariss@icloud.com) password: Marissarocks123\$

Get products to display: /shop route tells the server to retrieve the items table from the database and display the prices, a photo, and name of each item through react components. Also check id of vendor and get the name to display

Click on products: /shop/itemID route tells the server to retrieve the item from the database with the ID we pass in, get more details about item like images

Click on Buy product: `/purchase/itemID` route tells the server to retrieve the item from the database with the ID we pass in, get more details about item like images. ORM deletes item row, and emails the vendor of the item (gotten from the vendors table using vendor ID from items table) the address of the user
