

Minimal Etsy: The shopper goes to the website and sees a list of items that they can buy. The items have a price, image, title, and description. The shopper clicks on an image. They have to fill out a form to get shipping data and personal information. Once they fill in everything they click buy and the items get removed from the site and it ships to them. Also there is an admin only login page. They put in the username and password and have access to add items

Stack:
Client - Nextjs
Backend - FastAPI
Database - Supabase

```
Order = {
  orderID: uuid; //primary key for item
  itemID: uuid; //itemID of purchased item
  name: string;
  Address: string //address to ship item
}
Item = {
  itemID: uuid; //primary key for item
  title: string; //title of item
  description: string; //description for item
  price: number; //price of item
  Image: string; //link of image of item
}
Items = {
  Items: string[] //all available item IDs
}
Admin = {
  username: string;
  password: string;
}
```

Endpoint:
GET /getItems -----> returns items[] //gets all items to display on the main page
POST /buyItem(order) -----> //removes the items for the items list and also does backend logic to reserve the item and ship it
POST /addItem(admin, item) ----> //check if admin equals the admin in the database if yes it add the item to items array if not it throws an error
